

Barracuda SOT

Review by Todd Shewan

After years of development the Barracuda kayak enters a market where many top end fishing kayaks have become extremely heavy, 35 – 45 kg. At 16 kg the Barracuda SOT is half the weight of most!

The tri-hull design is unique, very manoeuvrable, extremely stable and fast through the water. With a raised bow to make surf landings a breeze, and a well rounded stern for extra buoyancy it copes with a full cargo of fish. It has pronounced rocker throughout. The glossy hull makes cleaning easy. The storage options galore should tick the boxes for any kayak fisho'. The Barracuda can be built to your specifications with up to 8 rod holders, a variety of seats, and your choice of fish finder transducer sockets. Barracuda boats, made in New Zealand, are market leaders in the use of technologically advanced plastics.
