

Canoe & Kayak Stainless Steel Wheels

By Pete Townend

The Canoe & Kayak stainless steel wheels are great.

These pictures show just how easy it is to move a kayak to the water without any heavy lifting.

The stainless steel wheels have a stand that allows them to sit beside the kayak unaided. You simply lift one end of the kayak over the wheels, pop it on and do up the clips. By positioning the wheels in the centre of the kayak, all the weight is on the trolley and not your arms. You pull the kayak along on the easy rolling wheels. I push the kayak into the tide until it is floating, then un-clip the wheels and simply fold down the wheel assembly to stow them in the hatch. I do the reverse on return and then wheel the kayak home again. Surprisingly there is enough buoyancy in the tyres so that the whole assembly floats.

I have used these wheels over many years with fully laden kayakers and on all sorts of surfaces. They have only been rinsed off occasionally, and because they are constructed of good quality stainless steel and with no bearings to clog up, they are still as new. These trolleys are proudly made in New Zealand.

New Tahe Marine models available before Christmas

Demo kayaks available to test paddle, then talk to your retailer about what colour combinations are available

- Full specs - www.tahemarine.com

Greenland T's, Reval's and Reval Midi's AVAILABLE IN STORE NOW

5.85 meter 'Wind', test paddle now as demo available - December Delivery
